

openEHR modelling practical

Getting started

1. Open a web browser – Chrome or Firefox are best
2. Go to <https://tools.openehr.org/designer>
3. Login: freshehr_training Password: ad4freshtraining
4. Choose the repository allocated to you – Aberdeen, Dundee or Inverness
5. Find 'Nursing Admission Assessment STARTER.v0 in the list of templates. This will open the template.

A. Tidy the basic template

Problem/Diagnosis

- Rename Problem/Diagnosis archetype to Main Diagnosis
- Constrain out everything apart from Problem/Diagnosis name

Adverse Reaction Risk

- Pull in Adverse Reaction Risk archetype
- Constrain out everything apart from Substance and Manifestation
- Rename 'Manifestation' to 'Reaction Details' and make it mandatory

Medication Order

- Clone Specific direction description
- Rename one to Dose and the other to Frequency

Vital Signs section

- Pull in Pulse Oximetry into Vital Signs section
- Constrain out everything apart from SpO2 ratio
- Make systolic and diastolic BP mandatory
- Make all vital signs archetype single occurrence only

Add a Clinical Frailty scale

- Goto <https://ckm.openehr.org/ckm/archetypes/1013.1.4691/export>
- Press the 'Export ADL' button and save the archetype somewhere on your system

- Go back into Archetype Designer and go to top-menu->'Import' then either Browse to your file or drag and drop then Upload.
- Go back to your template, click on 'content', then pull in the Clinical Frailty scale from the list of archetypes on the right.

B. Create a new local archetype - Additional information on admission

Create a new ADMIN_ENTRY archetype called 'Inpatient admission details' then add these 'element' datapoints

Mode of access	Ambulatory	☐
	Wheelchair	☐
	Stretcher	☐
	Other	

Transported with	Oxygen	☐
	Monitor	☐
	IV	☐
	Other	

Admission method	Waiting list	☐
	Booked	☐
	Planned	☐
	A&E department	☐
	General Practitioner	☐
	Bed Bureau	☐
	Consultant Clinic	☐
	Other	

Additional Help needed Yes ☐ No ☐

Once you have created your new archetype, go back to your template. Highlight 'content' and add your new archetype then Save it.

C. 'Form-centric' to 'Patient-centric'?

Think about how we might re-organise this information into multiple templates to make it more 'patient-centric' and reduce the data entry burden for the nurse (and patient!)

What information is about the patient 'globally' versus what is about the immediate clinical context.

List any parts of this dataset that might be handled more globally for the patient.
